NEUROSURGERY

***proGAV*<sup>®</sup> 2.0**  
IN TOUCH WITH YOU

*proGAV*<sup>®</sup> 2.0

A blurred background image of a hospital waiting area with people sitting on chairs and a nurse standing.

ADJUSTABLE VALVES  
HAVE EXISTED FOR  
DECADES. THE  
ADJUSTMENT AND  
TESTING OF THE VALVE  
SETTING IS STILL A  
CHALLENGE FOR  
THOSE INVOLVED (1).

Valve adjustments are performed postoperatively in 45% of the cases.

In 19 - 44% of the cases further pressure adjustments will follow during later treatment (1, 2).

Every valve adjustment is a challenge, both for the patient and the treating hospital staff. Diagnosis and adjustments are often only possible after a radiological examination, which is both time-consuming and costly. In addition to the journey to the clinic, the patient has to wait for treatment, often also accept radiation exposure (1). This makes it all the more important that valve adjustments are user-friendly and convenient.

VALVE AND SOFT TOUCH TOOLS

## USER-FRIENDLY ADJUSTMENT & VERIFICATION

With the help of the unique "Soft Touch" instruments, the *proGAV*<sup>®</sup> 2.0 offers a high level of patient comfort with its tactile feedback.

Pressing the valve surface lightly with your finger releases the "Active-Lock" mechanism and simultaneously sends a tactile feedback.

## MRI 3 TESLA CONDITIONAL

The "Active-Lock" mechanism of the *proGAV*<sup>®</sup> 2.0 prevents unintended valve adjustments by external magnetic fields up to 3 Tesla (3-5). Strainful follow-up examinations can thus be reduced for the patient.

## GRAVITATIONAL TECHNOLOGY

Miethke gravitational valves offer a high protection against overdrainage complications in hydrocephalus therapy (6-8).

# proGAV<sup>®</sup> 2.0

FUNCTIONALITY OF THE VALVE

---

The adjustment unit is adjustable in 1 cmH<sub>2</sub>O steps between 0 and 20 cmH<sub>2</sub>O.

---

---

The gravitational unit is offered in different pressure levels.

---

The *proGAV*<sup>®</sup> 2.0 is a posture-dependent valve, meaning the opening pressure changes gradually to correspond with the patient's body position. *proGAV*<sup>®</sup> 2.0 allows for complete customization of the patient's needs a specific opening pressure when the patient is lying down and an opening pressure for when the patient is upright.

---

The functionality of *proGAV*<sup>®</sup> 2.0 in different body positions is illustrated interactively in the Miethke App.

---

# proGAV<sup>®</sup> 2.0

## FUNCTIONALITY OF VALVE AND BODY POSITION

### SUPINE POSITION

When the patient is in the supine position, only the adjustable unit is active and preset to 5 cmH<sub>2</sub>O\*.

The gravitational unit is not active in this body position.

### UPRIGHT POSITION

In the upright position, the gravitational and adjustable unit work together. As the patient sits up, the tantalum ball (presented in green) is activated within the gravitational unit and due to its gravitational forces causes an increase in the valve opening pressure.

In the example shown, a gravitational unit with 25 cmH<sub>2</sub>O has been selected. The total opening pressure therefore amounts to 30 cmH<sub>2</sub>O\*\* when standing.

# proGAV<sup>®</sup> 2.0

## SOFT TOUCH INSTRUMENTS FOR VALVE ADJUSTMENT

Fig. 1

Fig. 2

### LOCALIZATION AND SETTING IDENTIFICATION

The *proGAV*<sup>®</sup> 2.0 *Compass* is used to localize the adjustable unit and identify current setting of the valve.

The *Compass* should be aligned over the valve with the aid of the integrated template – *Compass* lid is open.

After the adjustable unit has been localized with the finger, the *proGAV*<sup>®</sup> 2.0 *Compass* is applied over the valve in the direction of flow (Fig. 1)

The closed *Compass* indicates the opening pressure setting (Fig. 2).

Fig. 3

### ADJUSTING THE VALVE

The *proGAV® 2.0 Adjustment Tool* allows for an opening pressure of the adjustable unit to be set from 0 to 20 cmH<sub>2</sub>O.

The *proGAV® 2.0 Adjustment Tool* should be positioned so that the desired opening pressure is reflected in the direction of the valve inlet connector.

The *proGAV® 2.0 Adjustment Tool* should be centered over the valve.

By pressing lightly with the finger on the adjustable unit, the mechanical "Active-Lock" mechanism is deactivated and the opening pressure is set. Releasing the finger pressure automatically locks the valve (Fig. 3).

# proGAV<sup>®</sup> 2.0

## PRESSURE RECOMMENDATION

Patient	Selection of pressure levels		Combined opening pressure	
	 Adjustable differential pressure unit	 Gravitational unit (SHUNTASSISTANT <sup>®</sup> 2.0)		
Newborn and children up to 5 years 	5	20	5	25
Children from 5 years 	10	25	10	35
Adults  < 1.60 m > 1.80 m	5	25	5	30
	5	20	5	25
	5	30	5	35
Adults from 65 years  < 1.60 m > 1.80 m	5	20	5	25
	5	15	5	20
	5	25	5	30

All pressure levels shown here are in cmH<sub>2</sub>O. This is a non-binding recommendation. The physician decides in each case individually.

### OPENING PRESSURE RECOMMENDATION

The choice of the appropriate pressure level of *proGAV*<sup>®</sup> 2.0 depends on several other factors, including age, degree of activity, size and stature of the patient. The values given apply

to mobile patients. For patients with little mobility or a high BMI, the gravitational unit should be chosen lower than recommended here.

## SHUNT SYSTEM WITH SA 2.0 AND PEDIATRIC PRECHAMBER

- Combination of adjustable unit with gravitational unit, pediatric prechamber with an integrated distal catheter (1200 mm)
- Ventricular catheter with pediatric deflector and introducing stylet (250 mm)

\* Recommendations should only be used as guideline as other settings may also be necessary depending on the patient and anatomy.

Connector:  $d_o = 1.9$  mm  
 Adjustable unit:  $d_o = 4.5$  mm  
 Gravitational unit:  $d_o = 4.2$  mm  
 Catheter:  $d_i = 1.2$  mm,  $d_o = 2.5$  mm

Art. No.	Adjustable unit (5 cmH <sub>2</sub> O presetting)	Gravitational unit
FX596T Children up to 5 years old and adults over 65*	0 - 20 cmH <sub>2</sub> O	20 cmH <sub>2</sub> O
FX597T Individuals between 5 and 65 years old*	0 - 20 cmH <sub>2</sub> O	25 cmH <sub>2</sub> O

### OPTIONAL CONFIGURATIONS

Art. No.	Adjustable unit (5 cmH <sub>2</sub> O presetting)	Gravitational unit
FX438T	0 - 20 cmH <sub>2</sub> O	without
FX594T	0 - 20 cmH <sub>2</sub> O	10 cmH <sub>2</sub> O
